ACKNOWLEGEMENT

I am really happy to present project "Hostel Management System" in PHP & MySQL. I would like to thank Mr. Chandratre Y.V (head of Department) for allowing making full use of lab facility. I thank to Mr. Lande R. D. spends there valuable time for me and they gives me advice and useful suggestions about system. I am very thankful to our Mr. Lande R. D. guided me throughout the project without of them my project would not be successful. It reach up to the present stage because of their dedication and guidance.

And also special thanks to those who helped me for completing this project successfully they solve all my problems, error occurred while making a project and they suggested changes due to the which my project look more attractive and give me idea of project.

1. INTRODUCTION

This is a project work undertaken in context of partial fulfilment of B.B.A.(C.A.)-II have tried my best to make the complicated process of Hostel Management System as simple as possible using structured and modular technique. Project title "Hostel Management System" (a project for keeping students Record.) Hostel Management is The application of project management to the creation and development of hostels. Hostel management involves small sub_modules which have one unique base module & which is describes the all event details. This details are basically made for the Targeted customers the customer who wanted to plan and event they refer the system. Very few Hostel Management system maintain some of the data computerized list, vendor list, etc.

I design hostel management system to facilitate the hostel admin in the Hostel management. Hostel Management project is very user friendly software that Is why they do not require specially trained person to handle the software.

4. NEED OF THE SYSTEM & EXISTING SYSTEM

The existing system is manual based and need lot of efforts and consume enough time. In the existing system we can apply for the hostels are done manually. It may lead to corruptions in the allocation process as well as hostel fee calculation. The existing system does not deals with online registration and online application for hostel.

5. OBJECTIVE OF SYSTEM

- 1. Maintain the students as hostellers and waiting list students separately.
- 2. Process allotment list.
- 3. Admin can send the approval notification to every approved student via Automatically insert student's details to the hosteller's record when the allotment is confirmed by the admin and deleted when vacation is confirmed or after the course end date.
- 4. Students can register online.
- 5. Students can apply for hostel online.

6. PROPOSED SYSTEM

The proposed system is having many advantages over the existing system. It require less overhead and very efficient. The proposed system deals with the online registration, online admission and allotment process efficient.

The development of this new system contains the following activities, which try to automate the entire process keeping in the view of database integration approach. This system maintains students personal, address and contact details.

User friendliness is provided in the application with various controls provided by system rich user interface. Authentication is provided for this application only registered users can access. Event information files can be stored in centralized database which can be maintained by the system. This system provides the employee to manage the system systematically.

7. FEASIBILITY STUDY

1. FEASIBILITY STUDY TECHNICAL FEASIBILITY

The technical feasibility in the proposed system deals with the technology used in the system. It deals with the hardware and software used in the system whether they are of latest technology or not.

It happens that after a system is prepared a new technology arises and the user wants the system based on that technology.

This system use windows platform, html as front end technology and sql server as backend technology. Thus ONLINE HOSTEL MANAGEMENT SYSTEM is technically feasible.

2. ECONOMICAL FEASIBILITY

Economic analysis is the most frequently used method for evaluating the effectiveness of a new system. More commonly known as cost/benefit analysis.

3. OPERATIONAL FEASIBILITY

The project has been developed in such a way that it becomes very easy even for a person with little computer knowledge to operate it. This software is very user friendly and does not require any technical person to operate. Thus the project is even operationally feasible.

8. FACT FINDING TECHNIQUE

1. Fact Finding Technique

When stating work on system, system analyst has to collect information about the manual system from user. In order to developed this information system analyst prefers any one of the following fact finding techniques or prefer one or more fact finding technique according to the situation. These techniques are as follows.

• Record Searching:

Information was collected through some document, bills, some extra records of student, or information storing way all this details maintained by Shop Owner. User give the details of the procedure how they sells, buy the product to customer and do mortgage, how they maintain their records.

Observation:

Observation allows getting the information which may be useful for...

- . Details about the products i.e. their types, making type.
- . Information about how selling is done for artificial jewellery and also some temporary items requires for worship, functions etc.
- . How to calculate the mortgage amount?
- . How they maintain the manually record of customer?
- . There expectation from our computer system?
- . In some situation are they take extra charges from customer?
- . Which type of or names do they sell?
- . What type of details you take from customer, reference person?

Questionnaires:

I have used this fact finding technique as a supplement to my interviews By questioning the hostel. I have been able to study the system management

| and have been able to collect good data regarding my project question like |
|--|
| Questionnaire list: |
| 1. How do you maintain records? |
| 2. How do you maintain admission records? |
| 3. How many students allotted in one room? |
| 4. How many students allot in one room? |
| 5. How many room in the hostel? |
| |
| |
| |
| |
| |
| |
| |
| |
| |
| |
| |
| |
| |
| |
| |
| |
